

Executive Resilience Assessment

A scope-defined view on resilience, continuity and security governance — built for leadership teams that need clarity before committing time, budget or political capital.

“Built to produce decisions, not documents. A focused scope, an executive lens, and a clear path forward — sized to what your organization actually needs to move.”

01

When this matters

Most valuable in moments where leadership needs an external, structured view before approving a programme, allocating resources, or accepting risk.

TYPICAL TRIGGERS

- Before approving a larger resilience, BCM or security governance programme
- After a near-miss, incident, audit finding or regulatory inquiry
- When governance gaps surface during supplier reviews or M&A activity
- During market entry, operational restructuring or capital project delivery
- When leadership lacks confidence in what existing structures would deliver under pressure

02

Scope, deliberately bounded

The assessment is built around a single scope, agreed in writing before work begins. This produces sharper findings, faster traction and a clean basis for follow-up — rather than broad-brush coverage no one acts on.

POSSIBLE SCOPES

- A single business unit, site or operational function
- A critical service, process or end-to-end value chain
- Selected supplier, contractor or third-party dependencies
- An infrastructure, real estate or capital delivery project
- Selected BCM, crisis or security governance structures

Out of scope: full enterprise audit, certification readiness, technical penetration testing, forensic incident response. These can be referred to specialist partners where needed.

03

Approach & deliverables

Typically delivered in four to eight weeks, depending on scope and stakeholder availability. The work proceeds in three structured phases.

Scoping & immersion

Stakeholder mapping, document review, kickoff alignment, definition of success criteria for the engagement.

Assessment

Structured interviews, walkthrough sessions, dependency mapping, gap identification, validation of preliminary findings.

Synthesis & handover

Management presentation, written findings, prioritized roadmap, follow-up workshop with leadership.

DELIVERABLES

executive presentation · risk and gap register · 30/60/90-day roadmap · follow-up workshop · optional maturity heatmap or supplier dependency view

ABOUT

Senior advisor for resilience, business continuity, crisis readiness and security governance. Advisory practice developed since 2019, built on close to three decades implementing complex data and enterprise systems — connecting management decisions to the operational realities they depend on.

LET'S CONNECT

If a focused, scope-defined assessment would help your leadership team get to a decision faster — let's discuss whether it's the right fit for you.
