

Resilience, Crisis Readiness and Security Governance

Focused advisory, management-level crisis exercises and senior implementation partnership — for international organizations that need workable answers, not more documents.

“A European governance mindset, paired with implementation experience from complex data and enterprise systems — translated into structures that hold under operational pressure.”

TYPICAL ENGAGEMENTS · infrastructure and real estate · industrial and advanced technology · logistics and aviation · defence-related ecosystems · international business groups

01

Executive Resilience Assessment

A focused, scope-defined view on selected resilience, continuity and governance topics — built to give leadership a decision-ready picture, not an exhaustive audit.

The assessment is deliberately focused. A clearly agreed scope produces sharper findings, faster management traction and a clean basis for follow-up decisions.

POSSIBLE SCOPES

business unit or site · critical service or process · selected supplier dependencies · infrastructure or real estate project · selected BCM and security governance structures

DELIVERABLES

executive presentation · risk and gap register · 30/60/90-day roadmap · follow-up workshop · optional maturity view or heatmap

02

Crisis & Tabletop Readiness

A realistic management-level exercise that tests how decisions actually get made under serious disruption.

Scenarios cover operational cyber incidents, supplier or contractor failure, site disruption, aviation and logistics disruption, real estate or infrastructure service outages, and regional events affecting people, operations or supply chains. The focus is on leadership response, escalation, communication, operational continuity and recovery — not on technical forensics, penetration testing or security operations.

FORMAT

stakeholder interviews · tailored scenario design · half-day or full-day tabletop exercise · executive debrief · prioritized improvement roadmap

03

Implementation & Interim Support

Senior interim capacity for organizations that need to build, stabilize or accelerate resilience and security governance programmes.

Interim Resilience Lead

Sets up and runs BCM, crisis management and operational resilience structures from the ground up.

Security Governance Implementation Lead

Translates security governance requirements into working management systems, roles, reporting and decision processes. Focused on management-level governance, not on physical security, personal protection or technical security operations.

Programme Stabilization Advisor

Takes over and refocuses critical resilience or security governance programmes that have lost momentum.

ABOUT

Senior advisor for resilience, business continuity, crisis readiness and security governance. Advisory practice developed since 2019, built on close to three decades implementing complex data and enterprise systems — connecting management decisions to the operational realities they depend on.

LET'S CONNECT

For organizations preparing for — or working through — serious disruption, focused senior input often makes the difference between a plan and a working capability.
